

CHAPTER V

CLOSURE

A. Conclusion

According to the explanation of the result before, these are important point that the researcher found as a conclusion of this research:

1. From this research, it is conclude that the majority of the teachers understand learner autonomy, because from 14 items in the questionnaire, there were 63,4%-93,3% of the teachers who stated agreement toward the items about learner autonomy, specifically decision making, learner independent, psychology of learning, and teacher role in learner autonomy. However, 73,3% of the teachers still lack of knowledge about age and learner autonomy.
2. Additionally, it can be summarize that 63,4%-96,7% of teachers agree to promote autonomous learning in the situation of COVVID-19. Then, in respect to how teacher promoted autonomous learning in this research in the situation of Covid-19, there were teachers who involved the students in decision making; encouraged students to develop, achieve, and evaluate their own learning. Additionally, there were teachers who motivated their student and stimulate their student before learning the material.

Not all teachers in this research promote autonomous learning during pandemic, regarding teachers who promote it, as previously mentioned.

B. Suggestions

Based on the finding and the conclusion of this research, the researcher offers some suggestions:

1. For English teacher, it will be better for teacher to improve their theoretical and also practical understanding of autonomous learning by attending a workshop, seminar, teacher training, or and teacher professional development.
2. For school, it is necessary for school to consider toward autonomous learning as a new way in learning during this pandemic. Where the students indirectly force to study independently and responsible for their learning. Autonomous learning can be a proper choice in encouraging the students to start to be able to manage their own learning.
3. For further researcher, research about learner autonomy in Indonesia is quite limited all the more in relation to the covid-19 pandemic. The researcher do realized that this research has a lot of weakness and it is not perfect yet. The researcher suggested that the future research will also investigate the student' perception about autonomous learning. Or

investigate the comparison between teachers' perception and students' perception of promoting learner autonomy.
