

## **CHAPTER V**

### **CLOSURE**

#### **A. Conclusion**

The researcher draws conclusions based on the result of this research about expectations and experiences of 8th graders in SMPN 1 Rantau toward remote learning during the Covid-19 pandemic. According to the findings of this research, there are most important points which the researcher found:

1. Students expected that their academic performance would be happen through technology. By these technology students expected that they performance would be bad or good. Students also expected that their academic achievement would be bad or good.
2. Student experience is influenced by learning materials and teacher-student interactions which are related to the media and applications used by teachers and students.

#### **B. Suggestions**

1. Teachers can look for other applications that may be more devoted to the teaching and learning process. because if the pandemic continues, it is hoped that both students and teachers can continue to learn using certain

applications that are inexpensive and easy to use, such as Google Classroom and Schoology.

2. Students should be able to study together, even if only online and via WhatsApp so that they are more independent and do not depend on teachers only during remote learning.
