

CHAPTER V

CLOSURE

A. Conclusion

Based on the data analysis of designing of Bloom's Taxonomy in English teachers' lesson plans, it can be concluded that:

1. The researcher found that only one English teacher created the indicator refers to Bloom's Taxonomy revised, while learning activity and assessment, these two components are made refers to Bloom's Taxonomy revised created by English teachers at SMAN 1 Murung Raya.
2. The researcher discovered several obstacles faced by English teacher's during created the lesson plan such as developing the indicators, determining learning models and methods and lessons plan don't always work as expected, because conditions in the class can change. So, it is adjusting to the conditions of the class.

B. Suggestion

According to the research result, it requires evaluation in order to improve education quality in the future. The researcher wants to give some suggestion that relevant to this result. The suggestion are stated as follows:

1. For the researcher

This study is beneficial for providing understanding, knowledge and giving new experiences for the researcher especially about designing of Bloom's Taxonomy for English lesson plan.

2. For the English teacher

The teacher is crucial in carrying out the lesson plan, it determines whether a class success or fail, the teacher should work harder to understand and design the lesson plan because it is important for the teaching and learning process, the teacher should be close to their students therefore the teacher knows the characteristics of their students, it can be easier for the teacher to create the lesson plan and do the class systematically. The Resercher hope by conducting this study the teachers will prepare a lesson plan before teaching in the classroom such as designing the indicators and creating written lesson plan as well as creatively as possible using Bloom's Taxonomy classification, so that students not only feel comfortable but also gain academic knowledge while learning.

3. The future researcher

The resercher hope that this study will be used as a resource for readers and assist to the next researcher in completing their research.
