

## **CHAPTER V**

### **CLOSURE**

In this chapter, the researcher presents the conclusions and suggestions of study results and provides suggestions to the teachers and other researchers.

#### **A. Conclusion**

According to the research findings, the researcher can conclude them into two main points.

1. Principles in determining learning material which considered by the English teacher are listed below.
  - a. Principles of content accuracy on learning material,
  - b. Principles of suitability between learning materials and the current curriculum.
  - c. Principles of instruction and learning activities in the classrooms.
  - d. Adapting the concepts of adequacy, consistency, and suitability contained in the learning material.
2. Student worksheet is the type of learning material which applied by the English teacher in delivering the learning topics. In addition, dictionary is always supplied as a support facility to assist the students during the learning progress.

## **B. Suggestion**

Based on the conclusion which is stated above and the results of interview, the researcher would like to describe some suggestions for the English teachers and the future researchers.

### **1. The English teachers**

In order to provide meaningful understanding to the students, the teachers should consider proper principles in determining learning materials so the students are able to learn English well. As addition, encouragement and support are needed to boost the students' interest in grasping the learning topics.

### **2. The future researchers**

The future researchers may explore wider development of the learning material determination. Since different teachers have various experiences and principles in determining learning material, the future researchers can dig deeper the information from many teachers to develop the principles in determining learning material. Hopefully, the results of this research can be referred as an overview for them to obtain many principles applied by English teachers to determine learning material.
