

CHAPTER V

CLOSURE

Based on the finding and discussion, this chapter present the conclusion of the research and suggestion for the future research related with this topic. The result of the finding and discussion can be concluded and as the following representation.

A. Conclusion

From all of the description in the previous chapters, it can be concluded that:

1. Based on the results of the analysis, the application of multimodal in teaching reading is going well. This method is very effective and according to students' learning styles. By combining several ways and methods of delivery, students are more active and creative in thinking and can understand better.
2. Applying multimodal learning to learn to read gets a good response from students. From the results of observations and interviews it can be seen that multimodality in teaching reading is very helpful for students in understanding the material. They are very enthusiastic in learning by using media such as posters, pictures, and videos. They can also interact well when the teacher gives discussion assignments and appears and is active in role playing.

B. Suggestion

In this page, the researcher wants to give suggestion to:

1. For the teacher

The teacher is one of the most important components in education, especially in the teaching and learning process, as well as the main role that must be had, understanding the various characteristics of students who have different learning styles. Teachers are required to be more creative in presenting and delivering teaching materials, the goal is to make it easier for students to understand. Because of that, my advice for the future is that teachers must be able to maximize and be able to keep up with advances in technology to always be able to provide the best for their students. Teachers can use technology to support learning. teachers should be more active in controlling student activities. using English more and more often can hone students' abilities in increasing their understanding in English.

2. For the next researchers

For the next researchers who will take the same theme, this thesis the researcher has a perception that the design of study was imperfect. Therefore, the researcher wishes that other researchers can improve this study with the better design about multimodality in teaching reading
