

CHAPTER V

CLOSURE

A. Conclusion

Based on the findings of this study, it is recommended that educators and parents consider the use of educational videos in early childhood education programs as a supplemental tool to enhance learning outcomes. These videos provide a fun and interactive way to introduce new concepts and ideas to young learners, making it easier for them to understand and remember. When selecting educational videos, it is important to consider factors such as the use of storytelling, animation, and sound effects to engage children, and the incorporation of interactive activities to reinforce learning.

Furthermore, additional research is warranted to explore the effectiveness of educational videos for teaching other subjects to young children. The use of multimedia in education can provide new opportunities for teaching and learning, and exploring different ways to incorporate it into education could lead to better learning outcomes. It is important to keep in mind that educational videos should not replace other forms of teaching and learning, but rather be used in a balanced approach to education that includes a variety of teaching methods and activities to meet the diverse learning needs of children.

Finally, it is recommended that educators and parents carefully screen educational videos before showing them to young children to ensure that the content is age-appropriate and aligned with learning goals. This will help to

ensure that the videos are an effective and beneficial learning tool for children. By incorporating educational videos into early childhood education, educators and parents can create a more engaging and effective learning experience for young learners, ultimately helping them to achieve greater academic success.

B. Suggestion

This study suggests that incorporating educational videos into early childhood education programs can be beneficial for young learners. Educators and parents should consider factors such as storytelling, animation, and interactive activities when selecting videos to engage children and reinforce learning. Additional research is needed to explore the effectiveness of educational videos for teaching other subjects. However, it is important to note that videos should not be the sole source of instruction, but used as a supplemental tool to create a balanced approach to education. Finally, educators and parents should screen videos to ensure that they are age-appropriate and aligned with learning goals for effective and beneficial learning outcomes.
