

## CHAPTER V

### CLOSURE

#### A. Conclusion

Based on the results of this research, the researcher describes the conclusions or final results of the mathematical content analysis research on the English textbook "Student's Book: My Next Word for Elementary School Grade 1" based on the Merdeka curriculum as follows:

1. The mathematics content used in this textbook refers to the Merdeka curriculum based on mathematics learning outcomes in grade 1 of elementary school.
2. The English language elements that are widely used in mathematics content in English textbooks are mostly listening, speaking, and viewing elements. However, more elements of writing and presenting are also included so that students are more active and productive.
3. For both mathematics and English learning outcomes, this book is appropriate based on the achievements and content of the Merdeka curriculum based on grade level. And the aspects of this book are also quite relevant because the textbook is sufficient to cover a basic introduction to mathematics such as numbers, measurements, basic geometric shapes, and quantity of objects. Even though there is no

vocabulary list, the vocabulary or mathematics content contained in it is still in line with the learning outcomes in the Merdeka curriculum, especially for the content or material used and the textbook is completely in English so there is no list of Indonesian vocabulary in it that is quite good so that students remember more of the meaning.

## **B. Suggestions**

Researcher provided the suggestions related to this research:. Researcher suggests:

1. For book authors

Learning objectives need to be improved because there are chapters whose objectives are not by the content of the material in that chapter and also for the instructions used so more attention is needed.

2. For future researchers

This research can provide additional information regarding content material, especially related mathematics content based on the Merdeka curriculum.
