CLOSURE

A. Conclusion

After conducting this research and analyzing all the data, the writer would like to conclude all the result of study as follows:

After analyzing the result based on the explanation of the formulas above, it is clearly seen that $t \text{ count } (1.75) < t\text{-table } 5\% (2.02) < t\text{-table } 1\% (2.71)$. $t\text{-table}$ is higher than $t \text{ count}$. H_a (Alternative Hypothesis) is rejected and H_o (Zero Hypothesis) is accepted. By this result, the writer concludes that H_o is accepted.

By this result, the writer concludes that there is no significance different between students who do private tutoring and do not do private tutoring in students' achievement at the fifth semester students in English Department of Tarbiyah and Teachers Training Faculty at Antasari State Institute for Islamic Studies Banjarmasin.

B. Suggestions

This research suggests these following:

1. For the students, preferably in an activity to teach les need to be considered in the timing and the quantity so as not to interfere with the course.

2. For students who do not teach private lessons, you should also teach private lessons in order to add to the experience. But, with quantity is not too high and adjusted to the time course.
3. For other researchers, given the range of the existing limitations in this study, it is necessary to do similar studies with the place and the different characteristics and a broader subject, because these studies are very helpful and very interesting.
