

## CHAPTER V

### CLOSURE

#### A. Conclusion

According to the research and data analysis about swear words in users' comments on 9gag, there are some conclusions as follow:

1. The result of the study shows 8 of 16 types of swear word, they are predicative negative adjective, adverbial booster, cursing expletive, general expletive, idiomatic 'set phrase', literal usage denoting taboo referent, imagery based on literal meaning and personal insult referring to defined entity.
2. There are two functions of swear word in this study, primary function and secondary function. Primary functions found in this study are expletive and abusive, meanwhile secondary functions found in this study are humoristic swearing, euphemistic swearing and habitual swearing.
3. Contextual meaning of swear words in the users' comments are giving negative predicate to someone or something, insulting other users and some of them just general expletives, not directing to someone or something.

## **B. Suggestion**

Realising the result of the research, the researcher suggests:

1. By the considering that most of the results of this study is negative swear words, society should be wiser to respond swear words in internet, especially for 9gag users. Its better if the we think first before using swear word, besides it keeps our moral, it is to avoid other people feels offended.
2. Parents should be aware what their children browse in internet and give them explanation to avoid using swear words eventhough only in internet.
3. The lecturer or teacher can use this result of research to explain the students about swear words especially about their type and function so that the students have a comprehension about swear words and be wise to use it.
4. For futher research of this field, television program or game review channel in youtube is good choice to do research about swear word.
