

CHAPTER V

CONCLUSION

A. Conclusion

Based on the result of the research and data analysis, the conclusion can be taken that are:

1. The mean score of pre-test result in experiment class is 46.53 that classified into low category and the mean score of post-test result in experiment class is 72.67 that classified into good category. It means that students' ability in experiment class have increasing 26.14.
2. The mean score of pre-test result in control class is 40.93 that classified into low category and the mean score of post-test result in control class is 56.67 that classified into fair category. It means that students' ability in control class have increasing 15.74.
3. The result of $t_{test} = 4.26$. After it is consulted with t_{table} in the significance standard 5% and 1% t_{table} (5% = 2,00) $< t_{test}$ (4,26) $> t_{table}$ (1% = 2,65). It is found that t_{test} is higher than t_{table} . It means that H_a is accepted and H_o is rejected. By the result, that pairs-check technique is effective in teaching reading comprehension. The result shows that "there is significant difference of students' ability in reading comprehension between students using pairs-check technique and students without using pairs-check technique at the eighth grade students of MTs Ni'matul Aziz Jelapat 1.

B. Suggestions

Based on conclusion, the researcher gives suggestions for students, the teachers and the researchers.

1. For students

For the students class VIII of MTs Ni'matul Aziz Jelapat 1 are expected to study hard English subject especially in reading and improving their reading comprehension ability.

2. For the teachers

The English teachers in Junior High School are recommended to create comfortable situation in teaching and learning process. Thus, the students will enjoy learning English. The English teacher can use pairs-check technique as the teaching media to make their teaching interesting and motivate the students to communicate in target language. The teachers are expected to improve methods and technique in their teaching

3. For the other researcher

In this thesis, the researcher was aware that design of research was very simple. There are still many weaknesses that could be seen. Therefore, for further research is expected that the other researcher can improve this research with the better design and different object in order to support the result finding. In other words, the other researchers can use this research as the reference for conducting their research.
