

CHAPTER V

CLOSURE

This chapter provides conclusions and suggestions from research related to the use of the Discord application in providing online discussions during Covid-19.

A. Conclusion

After explaining the data in the previous chapter regarding the use of the Discord application for online discussions, the researcher can draw conclusions.

The use of the Discord application in providing online discussions is carried out in accordance with the theory of preparation and implementation of the steps for conducting a discussion but not in accordance with the theory when closing the discussion. The type of discussion used is informal discussion. The voice channel feature on discord can help us create discussion groups. The discussion went well and the objectives of the discussion were well achieved. Students and teachers responded well to the use of the Discord application for online discussions.

B. Suggestions

1. For Students

Using the Discord application for online discussions during covid 19 is a good step and can be continued.

2. For Lecturers

Researchers also hope that lecturers can pay attention to discussion steps based on existing theories so that the discussion can run even better. Researchers also suggest trying to use the Discord application for learning methods other than discussion

3. For the further Researchers

Researchers know that using Discord to accommodate online discussions is something new in the learning process. The researcher hopes that the next researcher can find something new from this topic and conduct a more in-depth analysis and research on the method of discussion. Researchers also suggest that further researchers can conduct research on the Discord application in its application to other learning methods. There are some interesting aspects that haven't been discussed about the Discord app for accommodating Online Discussions if you look further. In addition, some of the weaknesses of this research can be used as a reference for further research in the future to complement the online discussion method study and also the use of the discord application as a learning medium.
