

CHAPTER V

CLOSURE

A. Conclusion

The classroom management in teaching learning process in UPB (Language Development Center) Antasari run well and optimal, so the study process can take place effectively and efficient. In learning process of English teacher apply and make teaching preparation in order the learning process can be-effective and efficient. In addition to the way that teachers do in opening lessons always provide motivation that can arouse student enthusiasm for learning. Good classroom physical management is necessary for the class to be conducive to student learning activities. However carefully teachers in designing the learning system will not be able to optimize student learning activities, when teachers are not able to manage the class well.

Implementation teacher-students interaction build complies, teacher create atmosphere warmly and enthusiastic is necessary in the learning process, teachers who are familiar with the learners always shows enthusiastic in his work teacher looked at teaching learning process, teacher done the learning process well, teacher explain the subject matter, and make some game accordance with the material of learning, so the students can enjoy the learning and fun. Teachers are required to be very creative in the classroom, so that students are not bored and students are enjoy in following the lesson. Teacher make students to be disciplined in classroom, so the

learning process can run well, so that conflict and violence in the classroom can be resolved. Students become obedient and respectful towards the teacher, so there is no heavy obstacle facing the teacher.

B. Suggestion

1. The English Teacher in UPB UIN Antasari

Teacher have implemented the implementation of learning in the classroom well, it is expected that teacher can maintain effective and efficient classroom management as has been done, in order to become an example for other teachers.

2. The Future Researcher

Researchers have done as much as possible to complete this research well, but there are still many shortcomings and errors in this study, therefore researchers expect positive advice from readers of this thesis.
