

CHAPTER V

CLOSURE

A. Conclusion

Based on the finding, In the 66 sentences in the video, this study finds that there are 48 sentences that fall into the features of female language based on Lakoff's theory. From these findings, this study only found eight features they are lexical hedges or fillers, rising intonation on declaratives, empty adjectives, intensifier, hyper-correct grammar, avoidance of strong swear words and emphatic stress. Tag question features and avoidance of strong swear words were not found in Kamala's utterances.

In sixty-six sentences, the researcher got twelve sentences containing lexical hedges or fillers, two sentences containing rising intonation on declaratives feature, four sentences containing the empty adjective feature, nineteen sentences containing the Intensifier feature, seven sentences with the hypercorrect grammar feature, two sentences with avoidance of strong swear words feature and the last twenty nine sentences with emphatic stress feature.

B. Suggestion

Based on the result of the research, the researcher suggest that any situation and gender differences both in life and in interactions have diverse differences and have many differentiating influences. Every woman has the features of their own language, many factors that influence it including economic, social, work, environmental and others. This is evidenced by

studies that have been carried out by this researcher and other researchers with different subjects.

There are many examples to study sociolinguistics, this study may give an understanding about social perspective on femininity in this modern era. The researcher also suggests to future researchers who want to research the same topic try to research different subjects and different theories of the various features of women's language that are widely developed out there.
