Sri Norma Yanti, 180103040002: Relationship between Job Performance and Academic Achievement Chair of the Student Association of the Department of Antasari State Islamic University Banjarmasin, Thesis, Banjarmasin, Faculty of Ushuluddin and Humanities, Department of Islamic Psychology, 2022, Advisors: (1) Dr. H. Akhmad Sagir, M.Ag (2) Shanty Komalasari, M.Psi, Psychologist

Keywords: Job performance; academic achievement; President of the Student Association

An organization is a container for a group of individuals who have goals and want to achieve the same goals. The organization itself can be a place or accommodate the interests, talents and potential that exist in students. Students are always synonymous with organizations, not a few students and female students who become campus activists, besides that students are also required to pay attention to academic achievements while studying. This study aims to determine the relationship between job performance and academic achievement at the Head of the Student Association of the Islamic University Antasari Banjarmasin Department.

This research is a quantitative research using correlational method. The population in this study is the chairman of the HMJ UIN Antasari Banjarmasin who will serve in the 2021/2022 period. Sampling in this study used a saturated sample with a total sample of 26 people. The data analysis technique used is product moment correlation with the help of a computer application in the form of SPSS version 25.0 for window.

The results of the study show that: 1) there is a significant relationship between job performance and academic achievement at the Head of the Student Association of the Department of UIN Antasari Banjarmasin. 2) The level of job performance at the head of HMJ UIN Antasari Banjarmasin in the low category is 5 chairs (19.2%), the middle category is 16 chairs (61.5%), and the high category is 5 chairs (19.2%). 3) The level of academic achievement at the head of HMJ UIN Antasari Banjarmasin is in the low category of 2 chairs (7.7%), in the medium category is 19 chairs (73.1%), and in the high category there are 5 chairs (19.2%).
