

CHAPTER V

CLOSURE

This chapter presents the conclusions and suggestions for the results of this study. Conclusion is meant to conclude the research question. Suggestions are given to expect better improvements for teachers, students, and future research related to this research.

A. Conclusion

After conducting research, collecting data, conducting analysis, and presenting data. So in this section the researcher draw conclusions.

1. The results of Student perceptions show that more than half of students know well about Digital multimodal text in English second language class. In addition, Students have learned to design it. Although not all students are aware of its use in classroom learning, they are accustomed to using multimodal in communication, and hope this can be developed more broadly as an innovation in language learning both in print and non-print/digital texts in education in Indonesia.
2. The difficulties felt by students that making digital multimodal texts require a deep understanding of the meaning to be conveyed, furthermore they also pay attention to the value of beauty to attract students' attention, and this is the reason why they think designing it takes longer than other tasks. Even so, much convenience is offered in the use and creation of multimodal digital texts in the classroom. Some

abilities that are useful in the future can develop thanks to creating and using them in class. Moreover, according to them there are several solutions that can be used to reduce the difficulty in creating them, such as: visualization strategies to understand the meaning and using ready-made templates (such as Canva, Photoshop) to save time.

C. Suggestion

Based on the discussion and conclusion, the researcher gives some suggestions as below:

1. For Future Teacher

Prospective teachers are advised to become teachers who are more open to changing times. Technology is always evolving, and its development greatly affects the world of education. In addition, they are advised to be more creative in designing learning that is more fun and interesting for students.

2. For Students

Students are advised to be able to take advantage of technological developments to support learning in class, because education and technology are always related. Always open to learning new skills to make it easier for you in your future life.

3. For the future research

The researcher suggests future research to carry out the same research topic but focus on the relationship of an aspect in writing multimodal texts in second language classes.
