

CHAPTER V

CONCLUSION

A. Conclusion

Advances in communication technology have made people dependent on the internet. Many sources are available on mobile devices that can be used for education and learning. Websites, YouTube and mobile applications that researchers have previously described are three examples of technological advances that are very helpful.

This study found that these three items display a great deal of variation in their use as digital learning resources. The ExamEnglish.com and GrammarBank.com websites are perfect for users who want to try a simulation of answering TOEFL questions, especially structure expressions. Meanwhile, the Youtube Channels from BenPinter, Andrian Permadi, and Yanto Tanjung are perfect for those who want to study the TOEFL structure in video form, and the mobile application is also very useful for students who prefer to study via their smartphone, as they only have to download it.

B. Suggestion

After conducted this research, the researcher would like to give some suggestion to those who want to take the TOEFL is that there are lots of digital learning resources that can be used to learn and improve our English language

skills. Starting from websites, YouTube, and applications from smartphones, as the researcher described above, can be accessed easily and quickly. What we have to do is make the best use of all available digital sources.

Especially, for young people who are very used to smartphones, downloading applications such as "*Soal TOEFL Structure dan Pembahasan*" and the English Grammar Book, will be very helpful for learning Structure expressions on the TOEFL, because this application is very easy to use and easy to access anywhere.

The researcher also suggests to the founders of the learning resources that the researcher mentioned previously to continue to update the existing material and questions, so that they can attract more users.
