

CHAPTER V

CLOSURE

In this chapter, the writer presents the conclusions and suggestions of the data that has been analyzed.

A. Conclusions

According to the discussion of the findings , there are some conclusion as follows:

1. In the male language feature, taboos and swearing are found in several vlogger youtube videos such as Sturniolo Triplets, Sebastian Pirie, Hwaniiee, and swearing which includes strong swear words and weak swear words, and in directive and command language features found on youtube vloggers such as Sturniolo Triplets, Gavin Holcombe, Moritz Hau, Sebastian Pirie.
2. Whereas in the female language feature, praise is found on several YouTube vloggers such as Emmaxolouise, Taylor Bell, Kylie Jenner, With Love Leena, and Amber Alexander. This compliment feature is widely used on YouTube by female vloggers to compliment someone, things, places or themselves. The hedges language feature is also found on several YouTube vloggers, namely Emmaxolouise, Taylor Bell, Kylie Jenner, With Love Leena, and Amber Alexander. The purpose of the vlogger used hedging is to show confidence or hesitancy of what they have said..

Meanwhile, only one female YouTube vlogger was found in the tag question feature, and the minimal response feature was not found in this study because the data comes from utterances in YouTube vlogs, it may be difficult to find minimal response usage. Many vloggers talk only about themselves while discussing particular subjects like thoughts, ideas, experiences, interests, and so forth. Viewers are the recipients. As a result, finding the limited use of answers on a YouTube vlog is quite difficult. Consequently, the vlogger was unable to respond with such a minimal response. Finally, the question feature that used by female vloggers in YouTube is to be able to communicate with their audience through comments on their YouTube channel.

B. Suggestions

For lecturers and students, the researcher hopes that this research can inform if you want to teach and learn about language features through social media, YouTube vlogs can be a tool for learning.

Furthermore, for the next researchers, the researcher expects that this study can about the differences in the language features of male and female. The following researcher can compare Coates' theory with that of another linguist by performing the same type of discussion and examining both male's and female's language features in the context of dialogue (two or more individuals having a conversation). Therefore, all

language features that distinguish male and female, such as minimal response, can be discovered.
