(Appendix I)

Transliteration of Qur'an

Chapter/Page	Surah/Verse	Terjemahan	Translation
1/2	QS.-Al Hujurat/13	<p>”Hai manusia, sesungguhnya Kami telah menciptakan kamu dari seorang laki laki dan seorang perempuan dan menjadikan kamu berbangsa bangsa dan bersuku suku supaya kamu saling mengenal. Sesungguhnya orang yang paling mulia di antara kamu di sisi Allah ialah orang yang paling bertakwa. Sesungguhnya Allah Maha Mengetahui lagi lagi Maha Mengenal”.</p>	<p>O mankind! Lo! We have created you male and female, and have made you nations and tribes that ye may know one another. Lo! the noblest of you, in the sight of Allah, is the best in conduct. Lo! Allah is Knower, Aware.</p>

Part of The Last of Us movie script first episode

HOST And that's your biggest worry?

DR. SCHOENHEISS Yes, any kind of virus, but most probably something similar to influenza.

HOST Because of air travel.

DR SCHOENHEISS Through the air. Coughing

HOST Uh, I-I'm sorry. I meant people. On planes.
Uh, that was something you described in your book.

DR SCHOENHEISS Yes, a new virus in Madagascar, say, could be in Chicago within a matter of weeks. And we end up with a global pandemic. Pan meaning "all."The whmole world becomes sick all at once.

HOST Hm... and, uh, Dr. Neuman, you're also an epidemiologist.

HOST I presume the prospect of a viral pandemic keeps you up at night as well.

Dr. Neuman No.

HOST No?

DR. NEUMAN No.

[AUDIENCE LAUGHS]

DR. NEUMAN Mankind has been at war with the virus from the start. Sometimes, millions of people die, as in an actual war. But in the end, we always win.

HOST Uh, but you... Uh,
just to be clear, you, you do think microorganisms pose a threat.

DR. NEUMAN Oh, in the most dire terms.

HOST Bacteria ?.

DR. NEUMAN No.

HOST You like saying no.

DR. NEUMAN Yes.

[AUDIENCE LAUGHS]

HOST Not bacteria. Not viruses., So?

DR. NEUMAN Fungus.

[AUDIENCE MURMURS]

DR. NEUMAN: Yes, that's the usual response. Fungi seem harmless enough. Many species know otherwise. Because there are some fungi who seek not to kill... but to control. Let me ask you, where do we get LSD from?

HOST Where do you get it from?

[AUDIENCE LAUGHS]

DR. NEUMAN: It comes from ergot, a fungus. Psilocybin? Also a fungus. Viruses can make us ill, but fungi can alter our very minds. There's a fungus that infects insects. Gets inside an ant, for example, travels through its circulatory system to the ant's brain, and then floods it with hallucinogens, thus bending the ant's mind to its will. The fungus starts to direct the ant's behavior, telling it where to go, what to do, like a puppeteer with a marionette. And it gets worse. The fungus needs food to live, so it begins to devour its host from within, replacing the ant's flesh with its own, but it doesn't let its victim die. No, it... it keeps its puppet alive by preventing decomposition.

DR. NEUMAN How? Where do we get penicillin from?

HOST Fungus.

HOST Dr. Schoenheiss, you're in distress.

Dr. Schoenheiss Fungal infection of this kind is real, but not in humans.

DR. NEUMAN True, fungi cannot survive if its host's internal temperature is over 94 degrees.

DR. NEUMAN And currently, there are no reasons for fungi to evolve to be able to withstand higher temperatures. But what if that were to change? What if... for instance, the world were to get slightly warmer? Well, now there is reason to evolve. One gene mutates and an ascomycete, uh, candida, ergot, cordyceps, aspergillus, any one of them could become capable of burrowing into our brains and taking control not of millions of us, but billions of us. Billions of puppets with poisoned minds permanently fixed on one unifying goal to spread the infection to every last human alive by any means necessary. And there are no treatments for this. No preventatives, no cures. They don't exist. It's not even possible to make them.

HOST so if that happens?

DR. NEUMAN We lose. Clausal Ellipsis

[HOST CLEARS THROAT]

HOST Uh, we'll be back.
