### REVIEWER COMMENT

#### COMMENT#1

Grit refers to perseverance and passion in achieving a long-term goal. Although grit is regarded as a relatively stable trait, empirical studies also indicate that grit is malleable. Thus, documenting the role of grit in the association between teacher autonomy support and the social competence of undergraduate students is particularly valuable, as this finding may provide some possible insights into designing intervention or prevention studies. According to the extant literature, grit is positively linked to success within a broad range of academic settings, which has also been extended to college students. Despite such research progress, little attention has been paid to the possible linkage between grit and outcomes beyond academic settings. This must be taken into consideration in this research.
