

## CHAPTER V

### CLOSURE

In this chapter, the researcher presents findings from research results and suggestions. Before that, the researcher first presented a discussion related to teaching reading strategies implemented by teacher after the end of the pandemic. Then the results of the research are concluded.

#### A. Conclusion

1. In this research, the types of reading strategies implemented by teacher in the post-pandemic era have several stages, such as; the first stage in learning, the second in learning, and the last in learning. In the first stage the teacher brainstorms with students before explaining the new material that will be taught. In the second stage, the teacher begins to explain the material about introducing oneself in English using the pictorial riddle technique to students. And the last is for the teacher to review the material and ask questions to the students. After that the teacher concludes and closes the lesson.
2. The students' response to the reading strategy used by the teacher was that the material presented by the teacher felt easier to understand, the material was also easy to absorb and there were no difficulties. Expressing how students respond to the reading strategies implemented by the teacher in class can create a good learning process.

## B. Suggestions

Based on the results of the conclusions, the researcher provides several suggestions

### 1. For the English Education Department

For the English education department, researcher hopes that the results of this research will be useful. Researcher also hope that English teachers in the future will be more creative and innovative in determining appropriate reading strategies for students. Especially in reading skills, choosing the right strategy will produce a quality learning process in the future.

### 2. For the next researcher

For the next researcher, especially those whose research is related to this research. Researcher hopes that the research can become an appropriate reference. The researcher also hopes that in the future the results of this research can be further developed by further researchers, so that they can completing this strategies.
