

CONCLUSION

CHAPTER V

A. Conclusion And Suggestion

The conclusion of this research deals with the answer of the problem statements based on the research findings and discussion in the previous chapter. In this chapter the researcher draws the answer of the research implementation of translanguaging practice to the students' activities in learning English seventh grade students of MTsN 1 KTB. This research described about the implementation of translanguaging practice during teaching and learning for teachers and students.

It can be concluded as follow:

1. The teacher can make teaching and learning English more fun for their students.

The teacher creates an interesting and creative English learning model with a fun, enjoyable and easy-to-understand teaching method. So it can make a good and pleasant impression on students so that students become more interested in learning and students feel more comfortable in the teaching and learning process in class.

2. Students have access to multilingual resources.

This aims to improve speaking fluency in a second language and introduce literacy in a second language. so that understanding in both languages used is balanced and harmonious.

3. Students more easily respond to learning material taught by the teacher.

By combining two languages, students are able to understand more deeply the material presented by the teacher. This is because combining two languages makes them able to absorb and study what is explained more easily.

B. Suggestion

1. For Teachers

Recommendation for the teacher, hopefully this study can provide teachers are more innovative and active in teaching fluent in languages. It would be better for the teacher to use several ways and tools for teaching English using a translation strategy.

2. For Students

I hope for students that students can be more active in class and don't be afraid to make mistakes while learning English. Students, I hope can communicate more with the teacher.

3. For Researcher

I hope the research is expected to be developed by the next researcher especially in the translanguaging practice as a strategy can be more interesting to do research.
