

ABSTRACT

Ahmad Rija. 2024. Mukhabarah Cooperation for Rice Farmers in Increasing the Economic Income of the Tuyau Village Community, Pematang Karau District. Thesis, Sharia Economics Study Program, Faculty of Islamic Economics and Business, UIN Antasari. Supervisor Mr. Muhammad Rizali, S.H.I, M.H

Keywords: Mukhabarah Cooperation, Economic Income.

This research is motivated by the fact that not all farmers in Tuyau Village have their own land and some land is mostly owned by only a few people, especially those who have a lot of capital to buy land. However, so that no agricultural land is abandoned, the community is starting to take the initiative to utilize this land. Because most land owners in this village cannot work their land for reasons of not having the time and many land owners do not have the skills to farm, land management is handed over to people who are able to work it. Therefore, this research aims to determine the implementation of mukhabarah cooperation between rice farmers in the Tuyau village community, Pematang Angara subdistrict, and also to determine the rice farmer mukhabarah cooperation in increasing the economic income of the Tuyau village community, Pematang Karau subdistrict.

This research is field research, with the research subjects being 5 farmers and 2 land owners. Data collection techniques in this research are interviews, documentation study, and observation. A qualitative descriptive approach is the research used in this research. The data analysis technique uses descriptive qualitative.

The results of this research indicate that the implementation of mukhabarah cooperation in Tuyau Village, Pematang Karau, was successful using rice as the main crop. The 80:20 profit sharing ratio is applied fairly between farmers and land owners. The estimated duration of the contract is around 6-7 months, with the size of the land adjusted to the capacity of each farmer. This collaboration has made a significant contribution to improving the economy and community welfare through the efficient use of natural resources, modern technology, increasing farmer competence, cooperation in selling harvests, and government support. The result is increased income, reduced economic inequality, and improved overall well-being in Tuyau Village.
