

CHAPTER V

CLOSURE

A. Conclusion

This research sought to investigate students' interactions with Interactive and flexible teaching methodologies and to assess their impact on academic achievement within the pesantren environment.

This study aims to understand the experiences of students when interacting with interactive and flexible teaching methods within the context of a pesantren environment. The research results show that students find this learning approach interesting, responsive, and suitable for their learning conditions. Adjusting to students' physical and emotional conditions, using more interactive learning methods, and being flexible with busy schedules at the pesantren show the importance of adapting and having depth in the learning process.

In addition, interactive and flexible teaching methods have a positive effect on students' learning outcomes. This learning strategy helps students become more involved, increases their interest in learning, improves their understanding of the material, and strengthens their ability to manage their own learning process. Even though students find it challenging to balance their schoolwork with activities at the pesantren, they can still develop better study habits that help improve their academic performance. Interactive and flexible learning approaches can be seen as effective methods for maintaining and improving students' academic results in a pesantren environment.

B. Suggestions

Educators are advised to continue utilizing interactive and adaptable pedagogical techniques while maintaining a balance with conventional teaching methods. It is important for teachers to remain attentive to students' physical and psychological conditions, especially in residential school environments with demanding schedules. By doing so, teachers can create a more supportive and engaging learning atmosphere.

Administrators of pesantren institutions are encouraged to support professional development programs aimed at improving teachers' skills in implementing interactive and flexible teaching methods. Continuous institutional support is essential to ensure the consistent and effective application of these approaches in the learning process.

Future researchers are recommended to explore interactive and flexible teaching methodologies using different research designs, such as mixed methods or quantitative approaches, in order to obtain more measurable academic outcomes. In addition, further studies may also examine teachers' perspectives to provide a more comprehensive understanding of the topic.
