

CHAPTER V

CONCLUSION

A. Conclusion

Based on the result of the research and data analysis, the conclusion can be taken that are:

1. Students' achievement in experiment class is 74.82 that classified into good category and have increasing 53.64. While students' achievement in control class is 62.75 that classified into fair category and have increasing 39.25. The difference of increasing percentage from pre test to post test in experiment class with 25.32% is bigger than it in control class with 16.70%. So, giving homework on students' achievement is effective with 8.62% of effect size.
2. There is a significant difference between Experiment class by giving homework and control class without giving homework. 2.05 (t table, 5%) < 2.88 (t test), therefore H_a is accepted and H_0 is rejected.
3. The students responses are positive since they find some benefit and advantages of homework for them.

So, giving homework is effective on students' achievement at Islamic junior high school especially at class VII of MTs Diniyah Babussalam Academic year 2016/2017.

B. Suggestions

Based on conclusion, the researcher gives suggestions for students, the teachers and the researchers.

1. For students

For the students class VII of MTs Diniyah Babussalam, homework can be as habit learning in developing skill especially in grammar skill. They should be seriously in completing it.

2. For the teachers

The English teachers in Junior High School were recommended to design and giving homework to students. Most important aspect of homework design is to create homework assignments that are interesting and engaging to students. However teachers need to be aware of the importance of designing meaningful homework and what to do with the homework when students complete it. Will it be collected, corrected, counted as a grade? Will students have the opportunity to make corrections or redo the assignment if it is not satisfactory? These are all questions that should be considered and explained to students prior to giving an assignment. Besides, carefully selecting the types of questions and number of questions on an assignment very is needed.

3. For the other researcher

In this thesis, the researcher was aware that design of research was very simple. There are still many weaknesses that could be seen. Therefore, for further research is expected that the other researcher can improve this

research with the better design and different object in order to support the result finding. In other words, the other researchers can use this research as the reference for conducting their research.
