

BAB V

CLOSURE

A. Conclusion

From the analysis, the writer found 7 positive stereotypes and 21 negative stereotypes that are appeared in TV Series “*Fresh off the Boat* (Season 1)”. The result shows that negative stereotype is more than positive stereotypes. The writer found stereotype in physical appearance, abilities, goals, behaviors and gender aspect.

In terms of the meaning of words that include stereotype, the meaning is defined based on two considerations; based on the lexical meaning and the contextual interpretation from the TV series. In other words, the meaning of the stereotype is described clearly to make the reader easy to understand.

B. Suggestion

Based on the results of this research, some suggestions can be proposed to the following parties:

1. English Department

They need to put more attention and time allocation for the study of sociolinguistics in the real field, especially related to stereotype. This is important because sociolinguistics is the study of the relationship between language and society, then stereotype is closely related to the social situations. As a result, the students not only get theoretical knowledge but also directly practice in the real

field. This enables the students to get an effective and efficient way in learning about society and language.

2. English Students

They have to be more aware and should recognize the phenomena of stereotypes in their social community and also know how to analyze it. Based on this analysis, the writer knows that learning about a multicultural society through language in order to avoid the multiethnic gap in daily social life is really important. In addition, they are suggested to build more spirit to bring stereotypes as their main topic to be discussed, in order to enlarge the references dealing with this topic in linguistic field.

3. Other Researchers

Other researchers are suggested to dig a deep case concerning the factors of stereotype shaping and consequences of stereotype threat which are not analyzed in this research. Hopefully, the future researchers can conduct a research related to those problems.
